

Orthomed

Manufacturer and Supplier of
High Quality, Innovative Veterinary
Orthopaedic Products

About Orthomed

Meeting and exceeding medical gold standards

For over ten years, we have been developing, manufacturing and distributing a range of technically advanced implants and instruments which are engineered to simplify the most complex surgeries, underpinned by service, support and training which empowers specialists, general practitioners and first opinion vets to carry out gold standard surgical procedures.

Our product portfolio includes some of the most innovative orthopedic products and systems available to the veterinary industry: including products such as MMP OrthoFoam™, SOP™ and RidgeStop™. Product development is carried out by bio-mechanical engineers and material scientists, who work with world renowned orthopedic surgeons, all driven by the desire to bring to market products which break new ground whilst meeting and exceeding medical gold standards for surgical equipment.

We believe that the sale is just the first part of the journey; our customers are supported for life by a multi-faceted service offering, which includes hands-on surgical training workshops, pre and post-surgery advice and support, and access to a wide range of educational tools.

We are inspired by ground breaking engineering and satisfied only by enabling the best possible outcome for surgeon, patient and owner. Orthomed is a truly global company, headquartered in the UK, with offices in Europe, Australasia, North America, South Africa and the Far East.

Workshops

We are not just about selling products

Our aim is to inspire specialists, first opinion vets and general practitioners to be able to carry out gold standard surgical procedures, and we aim to do this through education and teaching.

All of our workshops consist of a mixture of theory, followed by a practical session using implants on sawbones which can then be taken away to show prospective patient owners. We also run cadaver workshops throughout the year.

We do this to ensure that the surgeon is 100% certain that they are confident in the system, that they understand the technique, the planning, the approach, the aftercare as well as avoiding any potential pitfalls. We want all surgeons to go away knowing that they have made the right choice.

About our Workshops

We are aware that the success of our products hinges upon the experiences of the surgeons who use them, and with this in mind – educating them in the use of the products is a hugely important part of what we do.

We have worked with leading experts in the field of veterinary orthopedics on the development of the products, and the knowledge and experience gained from these partnerships is passed on via our hands-on workshops.

Workshops take place throughout the year, across the globe, and are pitched at levels suitable for surgeons at every stage of their professional development. They are classroom based and offer participants the chance to carry out procedures, such as RidgeStop or MMP, on plastic models or cadavers, under the instruction of highly regarded tutors.

MMP

TTA for Canine Cruciate Repair

Course Content

The Modified Maquet Procedure (MMP) is an evolution of the TTA procedure for treatment of lameness due to cranial cruciate failure. The course is in two parts: a lecture based introduction followed by a practical session using synthetic bone models of the stifle, animations and video support material will also be used. The development of the technique, implants and associated instruments will be described and a detailed review of surgical technique and clinical outcomes will cover all aspects of MMP.

Benefits

- Over 35,000 dogs treated*
- Over 800 users globally*
- Use of a load-bearing, bio-compatible pure titanium wedge
- Rapid bone ingrowth
- Short convalescence time
- Can be used on small, medium, large and giant breeds

Key Learning Objectives

By the end of this course delegates should have an understanding of:

- Why we've developed another cruciate surgery technique
- Biomechanics and theoretical foundations of MMP
- Case selection for MMP
- How to perform the MMP procedure

*As of October 2017

RidgeStop™

For Patella Luxation

Course Content

RidgeStop™ is a novel surgical technique for treatment of patella luxation. A simple, affordable alternative to sulcoplasty surgery that can be used alone as the sole treatment for patella luxation, or as an adjunct to re-alignment operations.

The course is in two parts: a lecture based overview of the pathogenesis and treatment of patella luxation and a review of current surgical treatment options. This will be followed by an introduction to RidgeStop™, its application and case presentations, before a practical session where delegates will learn to use the RidgeStop™ system.

Benefits

- Made from medical grade Ultra High Molecular Weight Polyethylene
- Minimal joint interference
- Medial or lateral application
- Minimally invasive
- Uses standard cortical screws

Key Learning Objectives

By the end of this course delegates should have an understanding of:

- The aims of sulcoplasty
- Treatment selection in patella luxation
- The concept of RidgeStop™
- How to carry out the RidgeStop™ procedure

SOP™

For Internal Fracture Repair

Course Content

The SOP™ locking plate system was developed by veterinary surgeons for use in veterinary orthopedics. Locking plates are powerful and versatile implants but the mechanics and methods of application are significantly different from conventional plate systems. The course will cover locking plate mechanics, case selection, methods of application as well as modes of failure and a review of the extensive published literature on the SOP™ system.

Benefits

- Over 2,000 users worldwide*
- Over 100 published papers
- More than 50,000 cases to-date*
- Locks using standard cortical screws
- Does not require perfect contouring

Key Learning Objectives

By the end of this course delegates should have an understanding of:

- Features of locking plates.
- Case selection and clinical application of SOP™ system
- How to use SOP™ in a range of orthopedic applications

*As of October 2017

Advanced Spinal Course

Course Content

This three day conference will focus on advanced neurosurgical procedures of the cervical and thoracolumbar spine. It will consist of lectures including instruments, anaesthetic protocols, triage and step-by-step tricks and tips to six of the most common spinal procedures – T-L laminectomy, cervical slot decompression, spinal fracture stabilisation, atlantoaxial stabilisation, L7 – S1 decompression and stabilisation.

Attendees will choose and perform three laboratories from five offered. Cadavers will be available for all laboratories. The SOP™ locking plate system will be used for stabilisations. The attendees should already have basic knowledge of these surgical conditions, and basic surgical proficiency.

Key Learning Objectives

By the end of this course delegates should have an understanding of:

- Advanced neurosurgical procedures of the cervical and thoracolumbar spine
- Use of instruments anaesthetic and analgesic protocols
- Step-by-step tricks and tips of the six most common spinal procedures

Two-day wet laboratory on cadavers to encompass these surgeries

" Just wanted to say a huge thank you for today. Not only was it a great MMP and RidgeStop™ course but a really interesting discussion on the subject of cruciate “repair” and meniscal injury. What an amazing day."

Heidi Birkinshaw

“ Although there is an increased choice within the veterinary orthopaedic industry, I choose Orthomed for many of my instruments, power tools and specialist equipment. The quality of engineering and the life expectancy of their tools gives me great confidence in surgery when using them. ”

Robin Stratton
Accrington Vets4Pets

“ *Having worked with Orthomed for the last three years, I have found them a pleasure to work with. They're supportive, friendly, have a 'happy to help' attitude and their product range is of the highest quality.* ”

Ben Orton

Black Notley Veterinary Surgery

MMP

Canine Cruciate Repair System

01

User Guide available as
download or hard copy

MMP is a simple procedure which requires minimal instruments and removes the need for void-filling or bone-grafting. MMP uses precision instruments combined with OrthoFoam™, a unique titanium foam wedge with an appropriately rigid, porous structure which allows new bone cells to proliferate throughout the wedge, bonding it to the host bone and creating a solid repair which considerably reduces convalescence and considerably improves the long term prognosis for the patient.

MMP

Canine Cruciate Repair System

About MMP

The Modified Maquet Procedure (MMP) is so named to acknowledge the instigator of these operations, Dr P Maquet, a human orthopedic surgeon working in Belgium during the 1960s. MMP uses a wedge shaped implant of Titanium OrthoFoam™ which both defines the degree of advancement of the tibial tuberosity and holds the bone in its new place while the bony ingrowth that provides permanent, biomechanically robust fixation develops.

The Titanium OrthoFoam™ wedge provides a robust early fixation without the need for support bandages or a lengthy period of rest. The potentially disruptive forces that act to displace the distal end of the tibial tuberosity cranially following advancement are controlled using either a wire tension band, a titanium staple or a plate and screws removing the need for bone grafting or similar.

About Titanium OrthoFoam™

The titanium foam is biocompatible and possesses mechanical properties which make it suitable for implantation in loadbearing situations.

The interconnected pores permit rapid bone ingrowth and fixation to surrounding bone. Orthomed began work with the National Research Council of Canada in 2008 which has resulted in the first application of OrthoFoam™ in the MMP wedge for canine cruciate disease.

The open porous structure and sympathetic mechanical characteristics of the Titanium OrthoFoam™ implant encourages early and sustained ingrowth of bone removing the need for bone grafting or similar.

MMP Resources

An Owners Guide to MMP

We have produced an information booklet that allows the patient owner to understand the MMP operation; the benefits, what the procedure involves but also the important part that the owners play in giving the dog the best chance of an uneventful return to normal activity. These booklets are available by contacting your office.

Staple Inserter

Available for both standard and small breed size staples we have developed a tool to aid staple insertion. This disposable tool is simple to use, holding the staple so that it can be tapped in until fully engaged.

Papers

The following clinical MMP papers are available online and in print

RidgeStop™

For Patella Luxation

02

User Guide available as
download or hard copy

RidgeStop™ is a radical new product which provides surgeons with a cost effective alternative to sulcoplasty when carrying out procedures used to correct patella luxation. It uses a synthetic rim, held in by standard cortical screws, when carrying out procedures to manage patella luxation. The synthetic ridge is secured with cortical bone screws and avoids further damage to the articular cartilage of the trochlear groove. It can be used as a stand-alone procedure in less severe cases, or applied following realignment surgeries such as distal femoral osteotomy or tibial crest translocation.

RidgeStop™

For Patella Luxation

About RidgeStop™

RidgeStop™ can be used as a “stand-alone” procedure for less severe cases of patella luxation – Grade 2 or better. Alternatively, RidgeStop™ is employed as an adjunct procedure when re-alignment operations such as distal femoral osteotomy or tibial crest translocation have been performed. In such cases, RidgeStop™ acts effectively as an alternative to sulcoplasty procedures. When used as an adjunct to a re-alignment operation, the re-alignment surgery is completed before the RidgeStop™ is applied as part of the same anaesthetic procedure.

Features

Long proximal arm

– Effective with patella alta

Deep axial geometry

– Optimal patella stability

Thinner abaxial edge

– Minimises joint interference

Asymmetry

– Medial or lateral ridge application

UHMWPE (Ultra-high-molecular-weight polyethylene)

Used extensively in veterinary and human joint replacements

Standard cortical bone screws

Complex 3 dimensional geometry

Benefits of RidgeStop™

- ✓ Simple and quick
- ✓ Minimally traumatic
- ✓ “Stand-alone” procedure often possible, simplifying surgery
- ✓ Effective practical add on in cruciate surgeries where MPL needs to be addressed
- ✓ Reversible procedure
- ✓ Doesn't absolve surgeon from assessing need for re-alignment osteotomies

Also Available - Animation, video, user guide, after-care guide

**Practical Tips**

- 💡 Medial arthrotomy approach
- 💡 No need to close joint capsule
- 💡 Make sure it does not cross patella line of travel
- 💡 Evaluate tracking before and after application
- 💡 In case of “stand-alone” application, always warn owners that further realignment procedure may still be needed

RidgeStop™ Implants

The RidgeStop™ implants are precision manufactured using Ultra High Molecular-Weight Polyethylene (UHMWP) – the same material used extensively in veterinary and human joint replacement. This non-toxic, ultra-tough material transfers loads effectively and has an extremely low coefficient of friction making it ideal for patella luxation surgery.

RidgeStop™

Instruments

Each implant size has a corresponding drill guide to ensure ideal placement of the implant. Dependent on the implant size, they will require either two or three standard cortical bone screws. This guide allows not only ideal placement of the implant but also alignment of the divergent screw holes.

Resources available online.

SOP™

For Internal Fracture Repair

03

User Guide available as
download or hard copy

DCPs and reconstruction plates are familiar to most orthopaedic surgeons, but in recent years, the emergence of locking plates has allowed for greater flexibility and more successful surgical outcomes. We have taken the technique one step further with the SOP (String of Pearls) System, which provides exceptionally flexible options to the surgeon, particularly in complicated situations where contouring on multiple planes is required or where the location of the fracture makes exact contouring difficult. The SOP™ system is the only locking plate system on the market that locks with conventional cortical bone screws.

SOP™

The world leading locking plate system that uses standard cortical screws

About SOP™

The SOP™ (String of Pearls) system is a strong versatile locking plate system. The SOP™ plate consists of a series of cylindrical sections ('internodes') and spherical components ('pearls') that can be bent and twisted to suit almost every situation. SOP™ provides exceptionally flexible options to the surgeon, particularly in complicated situations where contouring on multiple planes is required or where the location of the fracture makes exact contouring difficult. As well as fracture repair applications also include ostetomies, spinal fusion, arthrodesis.

Features

Available in 3 sizes:

– 2.0mm, 2.7mm, 3.5mm

Locks using conventional cortical bone screws

No need for lots of expensive equipment

Plates don't need to be contoured to exact position

Works as an internal external plate

- ✓ 2,000 users worldwide*
- ✓ Approximately 100 published papers in veterinary peer reviewed journals*

- ✓ Over 100,000 cases to date*
- ✓ Used by general practitioners, universities and referral centres

*As of October 2017

"I have been using Orthomed SOP™ plates for eight years. They are an excellent adjunct to dynamic plate systems and allow for locking applications with standard cortical screws."

Dr. Dan Degner

**Range of Applications**

- ✔ Fractures of the Femur
- ✔ Fractures of the Humerus
- ✔ Fractures of the Tibia
- ✔ Fractures of the Antebrachium
- ✔ Pelvic Fractures
- ✔ Plate - Rod Constructs
- ✔ Spinal Fractures
- ✔ Surgical Spine Distraction-Fusion

Also Available - Animation, video, user guide, after-care guide

SOP™

Locking Plates

SOP™ Locking Plates 41

SOP™ Titanium Locking Plates 42

The SOP™ locking plate system can be contoured with 6 degrees of freedom and uses conventional screws. The plates come in three sizes – 2.0mm, 2.7mm and 3.5mm. Used in conjunction with the SOP™ instrumentation, the SOP™ locking plates can be easily contoured for a multitude of applications. With over 100,000 cases, and over 100 peer reviewed publications the SOP™ system is still the original and best.

The SOP™ titanium locking plate system works in the same way as the steel version, but uses titanium screws. Used for when MRI imaging is required.

SOP™

TPLO & TPO

Our SOP™ TPLO and TPO plates use the same technology as the regular SOP™ plates.

The SOP™ TPLO locking plate is both anatomical and symmetrical, the proximal part is pre-contoured and requires no further contouring, effective screw orientation is designed into the implant, whilst the TPO plates also uses the proven technology of SOP™. Both require the use of the SOP™ drill guide.

Carpal Arthrodesis

For Canine Carpus

04

User Guide available as
download or hard copy

These implants have been carefully designed to minimise complications. There is no need to bend the plate, which helps to maintain its integrity and the proximal portion is engineered to be shorter and wider to accommodate the screws, before thinning at the proximal end to minimise stress. Potential catastrophic complications arising from the use of a cast are removed as patients operated on using our implants do not require a cast

In This Section

PCA & ParCA

Carpal Arthrodesis **PCA & ParCA**

The castles partial arthrodesis plates are the first range of plates designed specifically for canine partial carpal arthrodesis. The plates have several custom design features which make them ideal for surgery.

TPLO

Tibial Plate Levelling Osteotomy

05

Tibial Plate Levelling Osteotomy reduces pain and instability in the canine stifle by removing a curved section of bone from the proximal end of the tibia, and rotating the bone to reduce the angle of the slope. Our TPLO plates are available in 3 sizes; 2.7mm, 3.5mm and 3.5mm Broad all pre-contoured to the top of the tibia with minimal further contouring to achieve a perfect fit. The proximal hole configuration of the 3.5mm Broad plate has been updated to minimise the risk of crossing screws, which reduces surgery time and considerably simplifies the procedure. Our TPLO plates are precision engineered from medical-grade stainless steel and laser cut to ensure that the finished product meets and exceeds current standards.

Instruments

07

Our reputation for premium quality is ably demonstrated by our range of core orthopaedic instrumentation, with special mention due to the bespoke instruments that is a fundamental part of orthopaedic procedures. All our instruments are manufactured with the same attention to detail found across the rest of our range, from premium quality materials, all adhering closely to current manufacturing standards.

More From Orthomed

We're passionate about the industry and the people that work in it, so we want to be able to offer the best possible support to all of our customers.

We've come up with a range of easily accessible tutorial material to offer advice before, during and after surgery.

We're a friendly bunch at Orthomed, so if you want to chat rather than just read or watch, we're only at the other end of the phone and we'd be happy to help.

Orthomed around the world

Supporting all of our customers

Although Orthomed was born and bred in the UK (and is very proud of its Britishness!), our desire to bring innovative implants to the wider veterinary community has resulted in swift expansion across the globe.

Orthomed currently has sister companies in the USA, Australia, Germany, Italy, Spain and Portugal, and South Africa, and this is just the start of our global expansion plans.

Overseas customers do not need to visit the UK to take advantage of our educational offerings – they will find themselves just as well catered for as their British counterparts, with workshops taking place in each of these countries. Although, they will of course be warmly welcomed if they choose to visit the UK and take part in a workshop on Orthomed's home soil...
